Plasma Television

The Pioneer PDP-436XDE 43" plasma with its 3000:1 contrast ratio, twin HDMI input, Pureblack Crystal Layer and Pure Drive 2HD digital video processing makes this TV a very competitive contender in the market.

In this situation it was the perfect candidate for installation as quality and reliability were key. The TV also needed to serve 2 rooms so its placement and mounting were quintessential in serving its purpose efficiently. To achieve this, an articulated arm was used so that the screen could be manually moved into the correct position depending on the viewing angle.

Audio System

Due to the size and nature of the install, the services of a Bose Lifestyle 38 System were employed to fulfill the task. The Lifestyle 38 comes with a zone system supplying 6 different rooms, namely the Sitting Room, Drawing Room, Dining Room, Gymnasium, Bedroom and Balcony. Additionally, the Lifestyle features an integrated Hard Drive for quick and easy music storage.

The Sitting Room audio is supplied over 5 Bose Dual Cube Speakers, mounted onto the ceiling in their ideal locations. The bass is provided by a Bose Acoustimass module which deals with the Low Frequency Effects of the music and movies.

The Drawing Room, which adjoins the Sitting Room, has 2 Kef IQ5 floor standing speakers that provide full range sound to the room.

The remaining rooms in the house use Bose 161 Speakers which provide ambient sound to the room whilst remaining crisp and clear.

The balcony speakers are specially designed Bose Environmental Speakers which have been rigorously tested by Bose for use externally. Amazingly, their built in strength and longevity have no effect on the audio reproduction.

Remote Control

Individually programmed to each room is a Bose PCM II LCD remote control that displays track listings from the main Bose unit. It allows you to control the music in the zone in which it is assigned. The remote control uses RF to control the system which gives an amazing range when

controlling the zones.
