Plasma Television

As with all our custom installations, the emphasis is on our ability to make the system look as natural as possible and to hide any cabling from sight, the inevitable downfall with most floor standing systems. The customer wanted to take advantage of a chimney breast that protruded into the room so we did. Using timber frame stud work, a false wall was built out from the existing chimney breast and a cut out the size of the telly was left so that the telly could be mounted inside.

The television used was a Pioneer 50" Plasma. As with all Pioneer products, it offers an outstanding quality panel with superb contrast ratio making the blacks appear as dark as they should.

Sky HD

When purchasing a HD Television, you will only gain the benefits when watching a High Definition broadcast or video input. The best way to experience HD in day to day life is through Sky HD. They offer increasing amounts of HD broadcasts removing the need to watch Standard Definition channels. Our customer appreciated the need to

use the technology purchased to its full and invested in Sky HD.

PS3 Games Console

The new Sony PS3 console uses Blu-Ray technology to deliver High Definition formats to customer's screens. Game play is considerably faster and the picture quality surpasses previous consoles. It was an ideal attachment to the system as it could be experienced to its full.

Audio System

The sound system needed to be as discrete as possible whilst the sound remains succinct. The best way of achieving this is with Bose Acoustimass 10 speaker system. The dual cube array deflects sound off walls around the room giving a more realistic effect.

Controlling the speakers was a high end Sony AV Amplifier which was already owned by the customer. The amplifier was successfully integrated into the system allowing source selection remotely and maintaining sound quality from source through to ear.

Custom Built Cabinet

The cabinet had to be custom designed and built to contain all of the AV equipment. Using custom shelf spacing and cut outs, the cables enter the cabinet without becoming visible keeping the entire installation clean and tidy.
